01 Brand foundation

Who we are, what the cube means and how we talk.

WHO WE ARE

The Turing Council is the student council for master's students at DTU Compute. We represent the students in four study lines: Computer Science and Engineering, Human-Centered AI, Mathematical Modelling and Computation, and Autonomous Systems.

We speak for students at department and faculty meetings, connect them with industry and research groups, and run social and learning events like Career Night and Research and Thesis Night.

TAGLINE

The voice of DTU Compute.

Used under the name in lockups, as the sign-off in posts and on covers. Always in this wording, always sentence case.

THE MARK

One cube, four study lines on top

The cube is built from our initials: the T on its left face, the C on its right. On top sit four tiles, one for each study line, each in its own DTU colour. They're the same size and all lit at once: no study line comes first, and together they make the department.

The tiles are also bits: switched on, side by side. That idea carries into the bit grid pattern in chapter 06.

TONE OF VOICE

Clear

Short sentences. Say what happens, when and where. No jargon from the department's meeting notes.

Student to student

We're fellow students, not an office. Write "we" and "you", use contractions.

For all four lines

Name the study lines by name. Don't let one line's slang or examples stand for everyone.

A little nerdy

A bit pun or a binary joke now and then is welcome. Never at the cost of being understood.

Say Career Night is on Thursday. Come and meet companies hiring DTU Compute master's students.

Not We are pleased to announce that the annual Career Night event will take place.

Say Something wrong in your course? Tell us, and we'll take it to the department.

Not Students are encouraged to submit feedback through the appropriate channels.

02

Colour

DTU Navy blue first. White for text. Four DTU secondary colours as study-line accents, each with five intensity levels.

BASE COLOURS

DTU Navy blue

#030F4F

RGB 3 15 79 · CMYK 100 94 44 40 · Pantone 655 C

Main background. Most of every layout. DTU secondary colour.

White

#FFFFFF

RGB 255 255 255

Text and the letters of the cube. DTU primary colour.

Lilac

#C3C6EC

RGB 195 198 236

Secondary text on navy: taglines, dates, captions. Our own addition, not a DTU colour.

Navy 900

#02092F

Overlays, footers

Navy 700

#17225D

Cards on navy, empty bit cells

Navy 500

#2E386D

Lines, secondary text on white

Navy 100

#DCDDE6

Light panels in documents

STUDY-LINE COLOURS

Four of the secondary colours in DTU's design guide. The study-line assignment is ours: DTU doesn't give departments or study lines their own colour. Each colour belongs to one study line. Use it for that line's events and content, and all four together only for things about the whole council.

DTU Orange

#FC7634

RGB 252 118 52 · Pantone 1505 C

Human-Centered AI

DTU Purple

#79238E

RGB 121 35 142 · Pantone 2587 C

Mathematical Modelling and Computation

DTU Bright green

#1FD082

RGB 31 208 130 · Pantone 3385 C

Autonomous Systems

DTU Blue

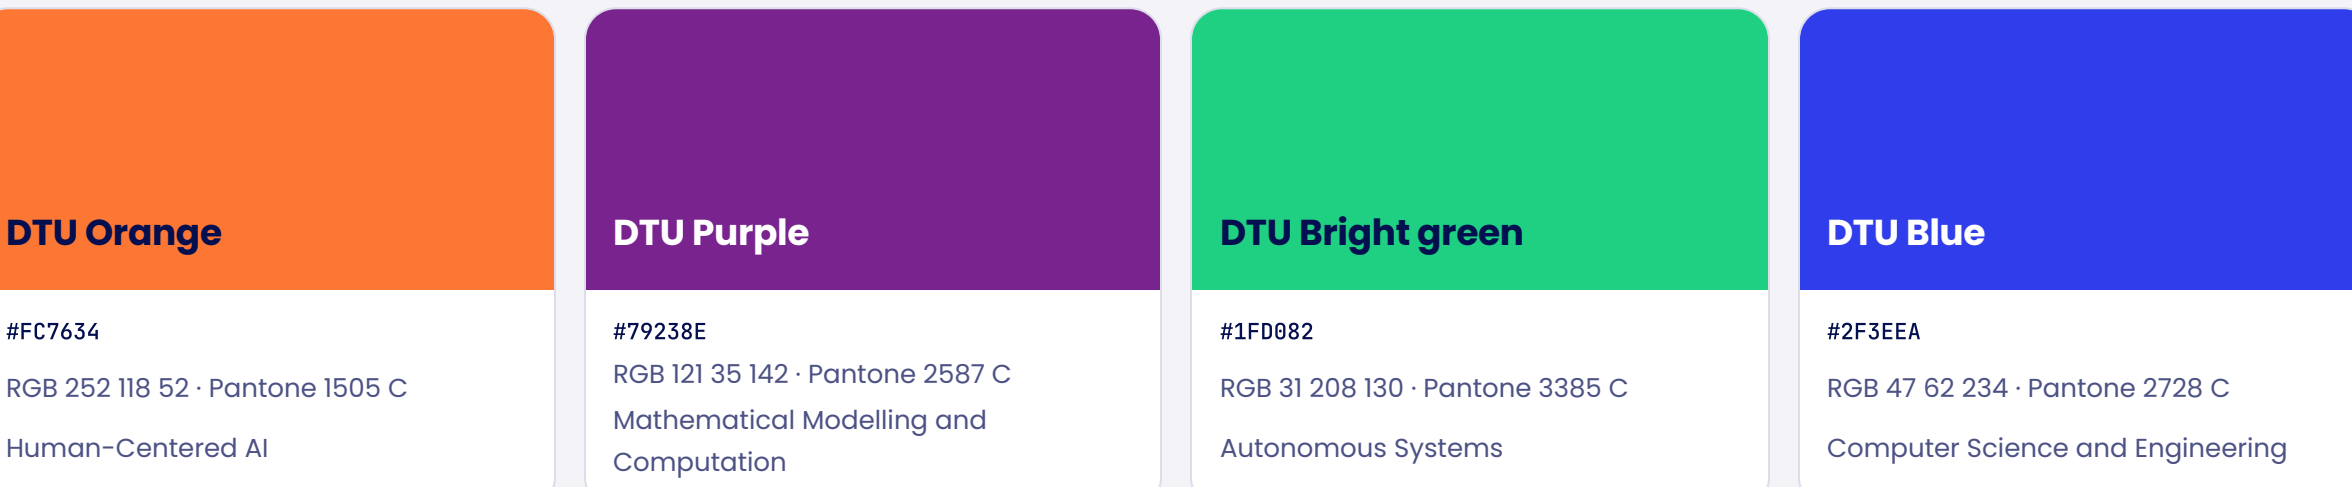

#2F3EEA

RGB 47 62 234 · Pantone 2728 C

Computer Science and Engineering

INTENSITY LEVELS

Like a contribution graph, every study-line colour has five steps from "empty" to "full". These steps are our own blends towards navy, not DTU's official tints (80, 70, 60 and 50 %). They're used in the bit grid and in charts. Level 0 is the same for all four lines.

PROPORTIONS

Navy carries the layout, white carries the words, colour is the accent. If a piece looks like a rainbow, there is too much colour.

TEXT CONTRAST (WCAG)

COLOUR	ON NAVY	ON WHITE
White	17.7:1	–
Lilac	10.6:1	1.7:1
DTU Orange	6.6:1	2.7:1
DTU Bright green	8.8:1	2.0:1
DTU Blue	2.5:1	7.0:1
DTU Purple	2.1:1	8.6:1
DTU Navy blue	–	17.7:1

4.5:1 or more is fine for text. Blue and purple are for tiles and shapes on navy, never for text there. Orange and green never carry text on white.

Source

DTU Navy blue, White and the four study-line colours are DTU's official colours, from the DTU design guide: **designguide.dtu.dk/colours**. The page also lists CMYK and Pantone values for print. The navy scale, lilac, paper and the intensity levels are Turing Council additions.

03 Logo

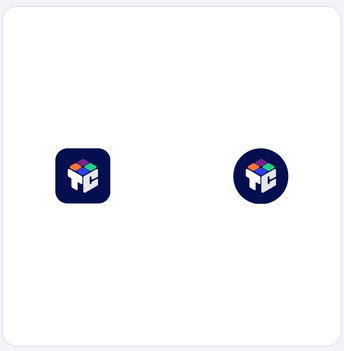

The cube, its lockups with the name, and the one-colour version.

Primary Full colour on navy

On light backgrounds Always in its navy tile

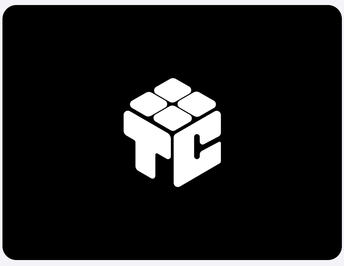

App icon and profile picture

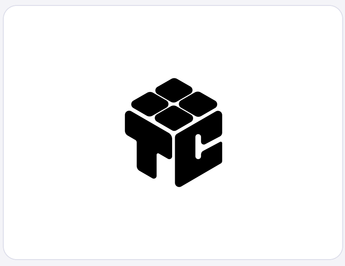

Navy square, cropped by the platform

ONE COLOUR

For stamps, laser engraving, foil, embroidery and one-colour print. Everything in a single ink; the gaps between tiles and letters carry the shape.

White `tc-logo-mono-white`

Black `tc-logo-mono-black`

Navy `tc-logo-mono-navy`

LOCKUPS

Horizontal with tagline Default

Horizontal, light Documents, email signature

Stacked with tagline Square spaces, posters, merch

One colour Same rules as the mark

Every lockup exists as dark (white text), light (navy text, cube in its tile), mono white and mono black. The name is set in Poppins Bold and converted to outlines in the files, so it looks the same everywhere.

CLEAR SPACE

X is the height of one top tile. Keep at least X empty on every side. The exported files already include it.

MINIMUM SIZE

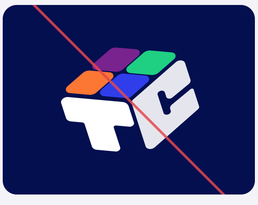

VERSION	SCREEN	PRINT
Cube	24 px tall	10 mm tall
Horizontal lockup	120 px wide	30 mm wide
Lockup with tagline	200 px wide	45 mm wide
Favicon	16 px	–

Below these sizes the tiles merge. Drop the tagline first, then the name.

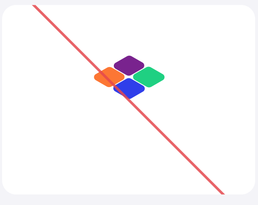

DON'T

Recolour the tiles

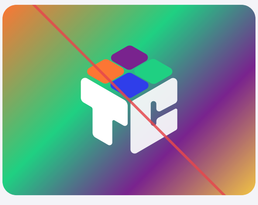

Rotate or stretch

Use the colour logo on white

Add effects

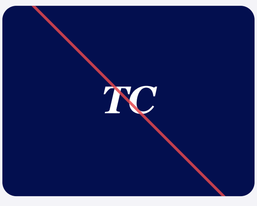

Put it on a busy photo

Change the letters

Use blue or purple for text on navy

Rebuild it with another font

04

Typography

Poppins for everything people read. JetBrains Mono for the small technical labels.

Label	JetBrains Mono Medium	12 / 16, uppercase	+10%	12 NOV · 18:00

Where to get them

Both are free on Google Fonts: fonts.google.com/specimen/Poppins and fonts.google.com/specimen/JetBrains+Mono.

Fallback

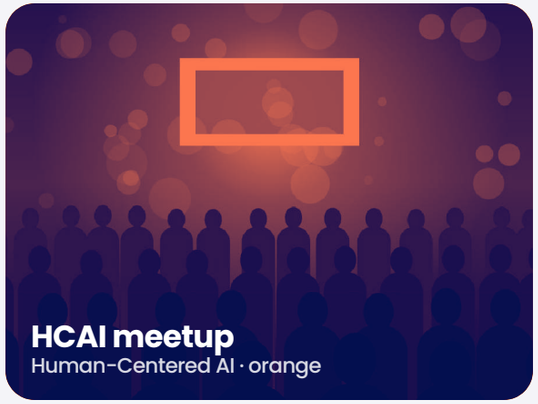

If Poppins isn't available (Word on a shared PC, for example), use Arial. Never a script or decorative font.

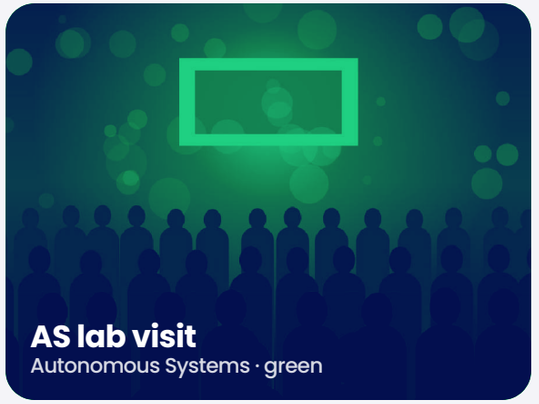

Rules

- Sentence case for headlines and buttons
- Mono only for labels, dates and numbers, always uppercase
- Left-aligned text; centre only short lines on posters

05 Imagery and photo style

Duotone: navy shadows, study-line colour highlights. Any phone photo becomes ours.

Photos are generated placeholders. Purple works the same way as the others.

How to make one

- Affinity: Layer → New Adjustment → Gradient Map. Set two stops: navy `#030F4F` on the left, the study-line colour on the right.
- Photoshop: the same with a Gradient Map adjustment layer.
- Phone: Canva's Duotone effect with the same two colours.
- Raise contrast a little first. Flat photos give muddy duotones.

`navy → study-line colour`

`navy → lilac for council-wide content`

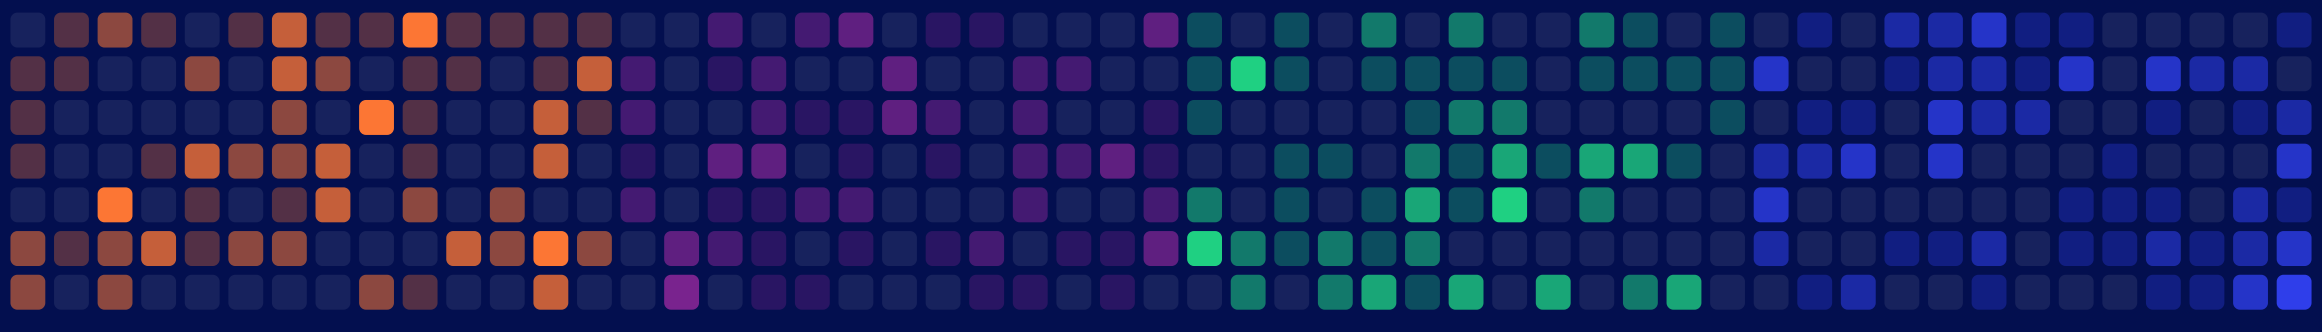

Rules

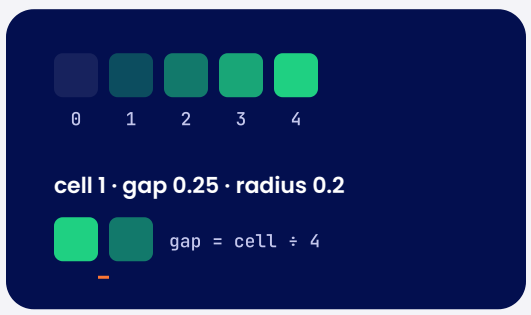

- One colour per photo. Use the colour of the study line the content is about.
- Content for the whole council uses navy to lilac.
- Real people and real events. No stock photos.
- Faces must stay recognisable. If they don't, pick another photo.
- Text goes on the navy shadow areas or on a navy panel, never across faces.
- Keep the untouched originals in the shared Drive, for press and for DTU.

06

Graphic elements

The bit grid: rounded cells like a contribution graph, lit in the study-line colours.

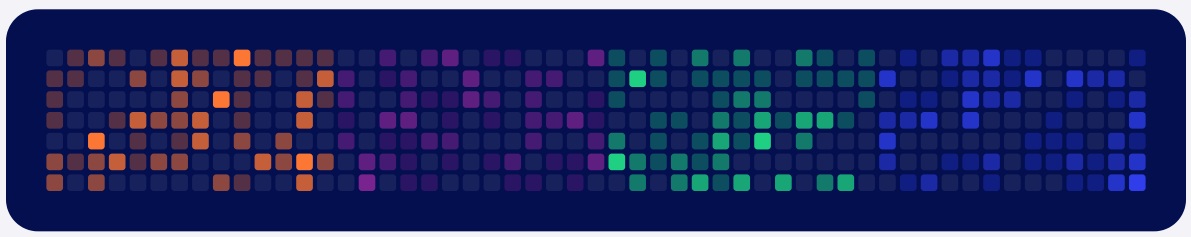

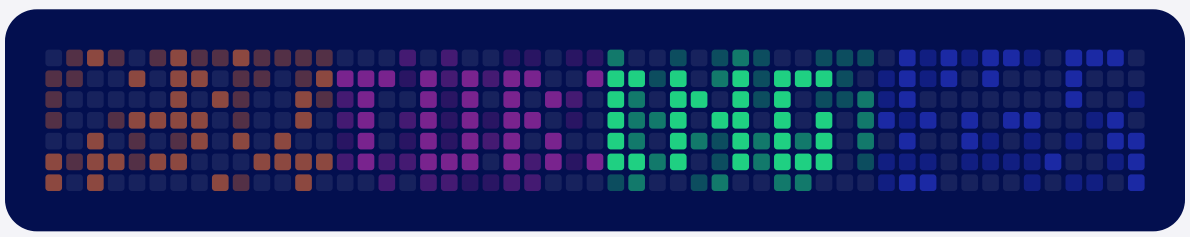

How the grid is built

Square cells with corners rounded to 20% of the cell. The gap is a quarter of the cell. Each cell shows one of the five intensity levels from chapter 02. Columns read left to right, like weeks on a contribution graph.

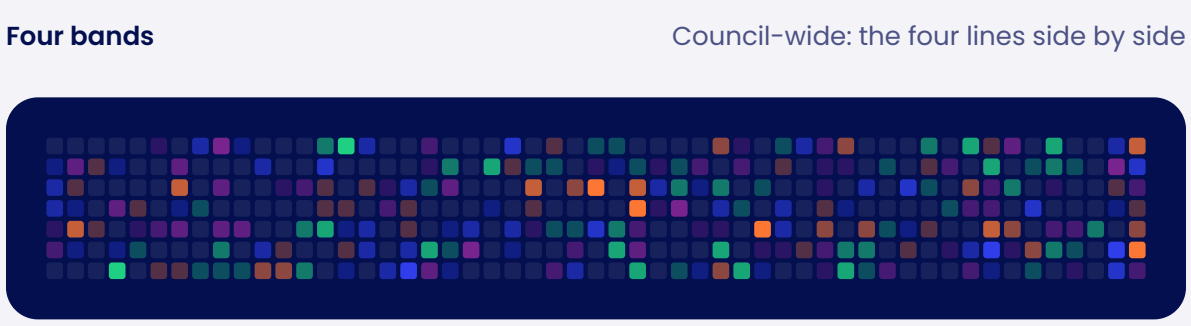

VARIANTS

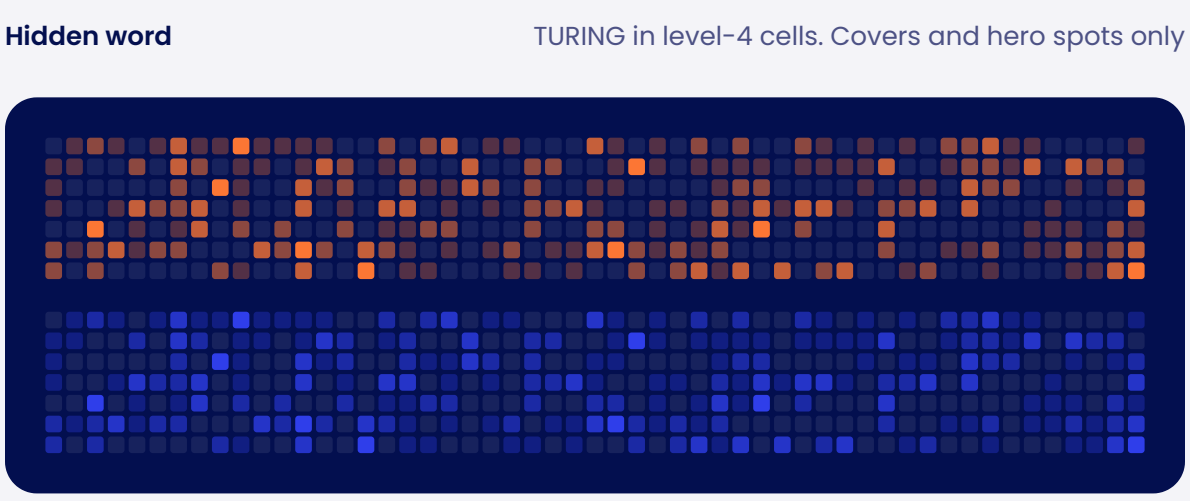

Four bands — Council-wide: the four lines side by side

Hidden word — TURING in level-4 cells. Covers and hero spots only

Mixed — Backgrounds, merch prints

One study line — For that line's events. Shown: HCAI and CSE

Do

- Run it along an edge: the bottom of a post, the side of a banner
- Keep it under a third of the layout
- Animate it: cells lighting up one by one

Don't

- Put body text on top of it
- Change the cell shape or the levels
- Mix one study line's colour into another line's content

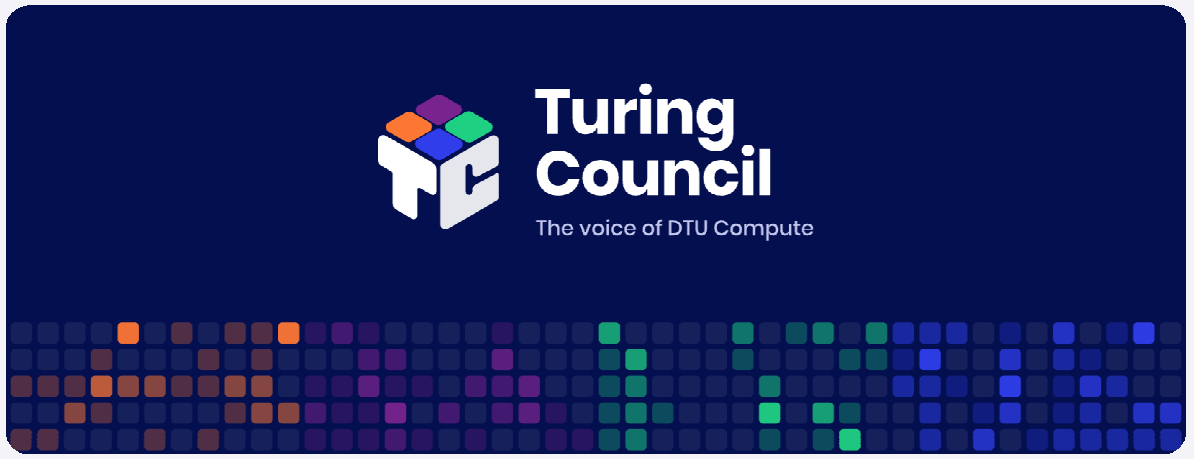

Files

`06-pattern/` has every variant as SVG, a 2400 px wide strip and a full 1920 × 1080 background.

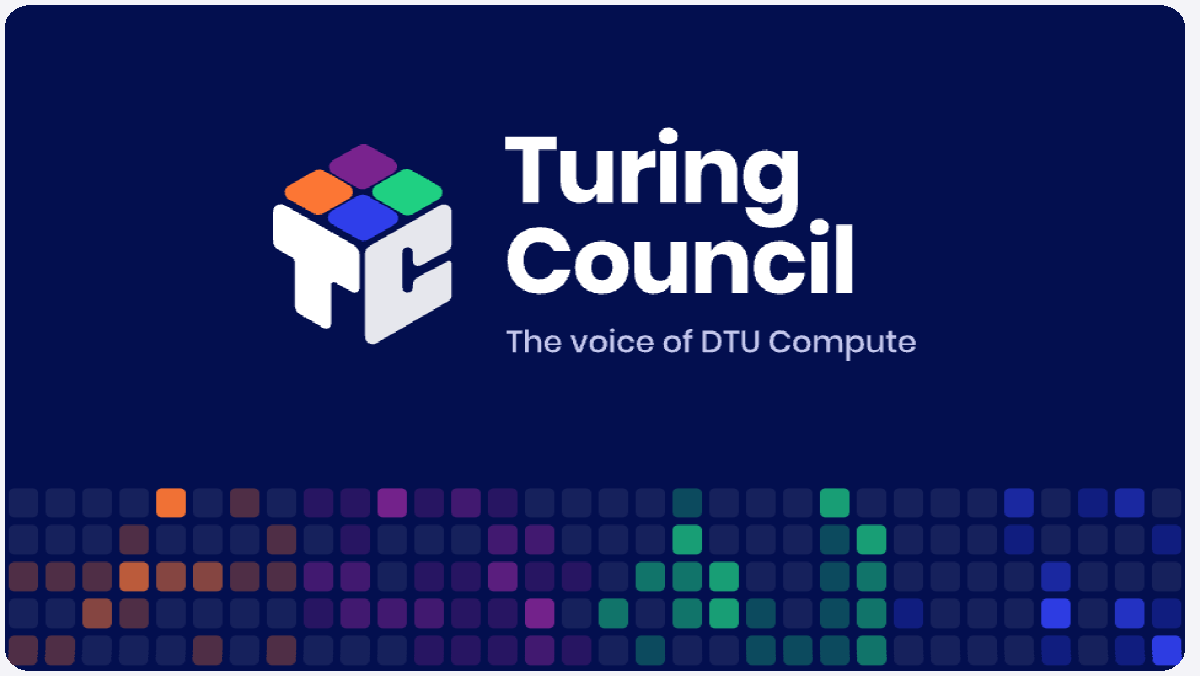

07 Using the brand

How it comes together, and who looks after it.

IN USE

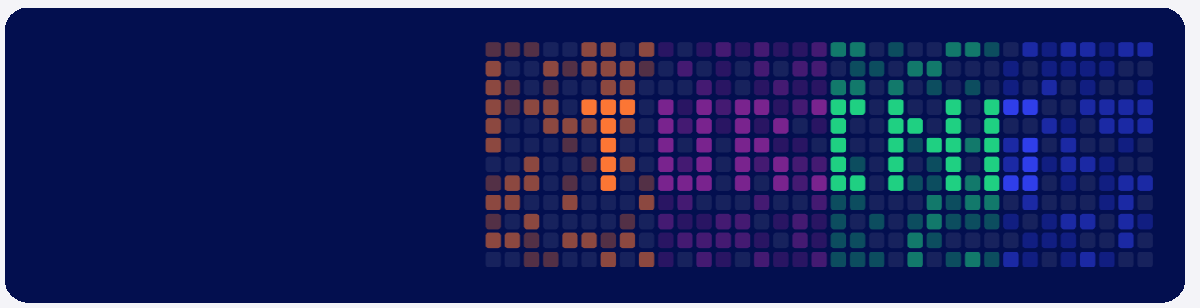

Facebook cover 1640 × 624

Discord banner 960 × 540

LinkedIn company cover 1128 × 191

LinkedIn banner for members 1584 × 396

Study-line content

An event for one study line uses that line's colour: in the duotone photo, the bit grid and small accents. The logo itself never changes.

Council-wide content

Navy, white and all four colours together, through the four-band bit grid or the logo. Duotones go navy to lilac.

With DTU and partners

Next to the DTU logo or a company logo, use the horizontal lockup at the same height as their logo, with clear space between. Never merge logos.

Social posts

Start from the backgrounds in `05-social/background`: navy, logo in the corner, bit grid at the bottom. Headline in Poppins Bold, date in JetBrains Mono.

Files and naming

Always take files from the brand kit, never from a screenshot or an old post. Name new files `tc-[what]-[variant]-[size]`.

Who looks after it

Marketing and Communications keeps the master files in the shared Drive and approves new templates. Ask in the council chat before making a new one.

08 Brand kit

Every file, where it lives and what size to use.
